

Security 101 – Why I MUST know about the NESAF!

The National eHealth Security and Access Framework

Yvette Lejins

Lead Architect, Information Security

Magic Dave.....

Australia is moving

- Bye-bye paper records!
- eHealth – moving en masse
- Widespread change in access, creation and delivery of information
- The future (and the now!) holds new risks – we must be prepared!

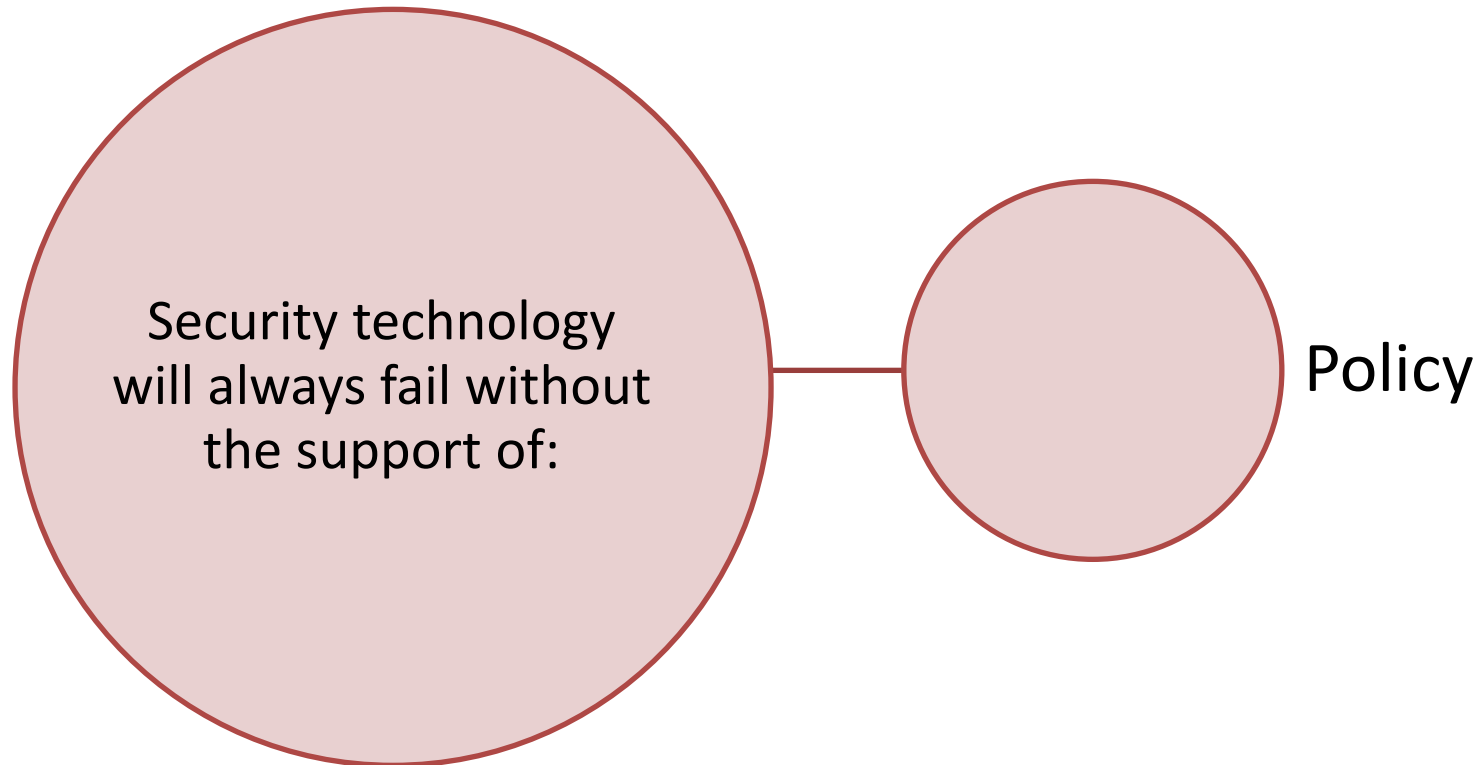

The problem space

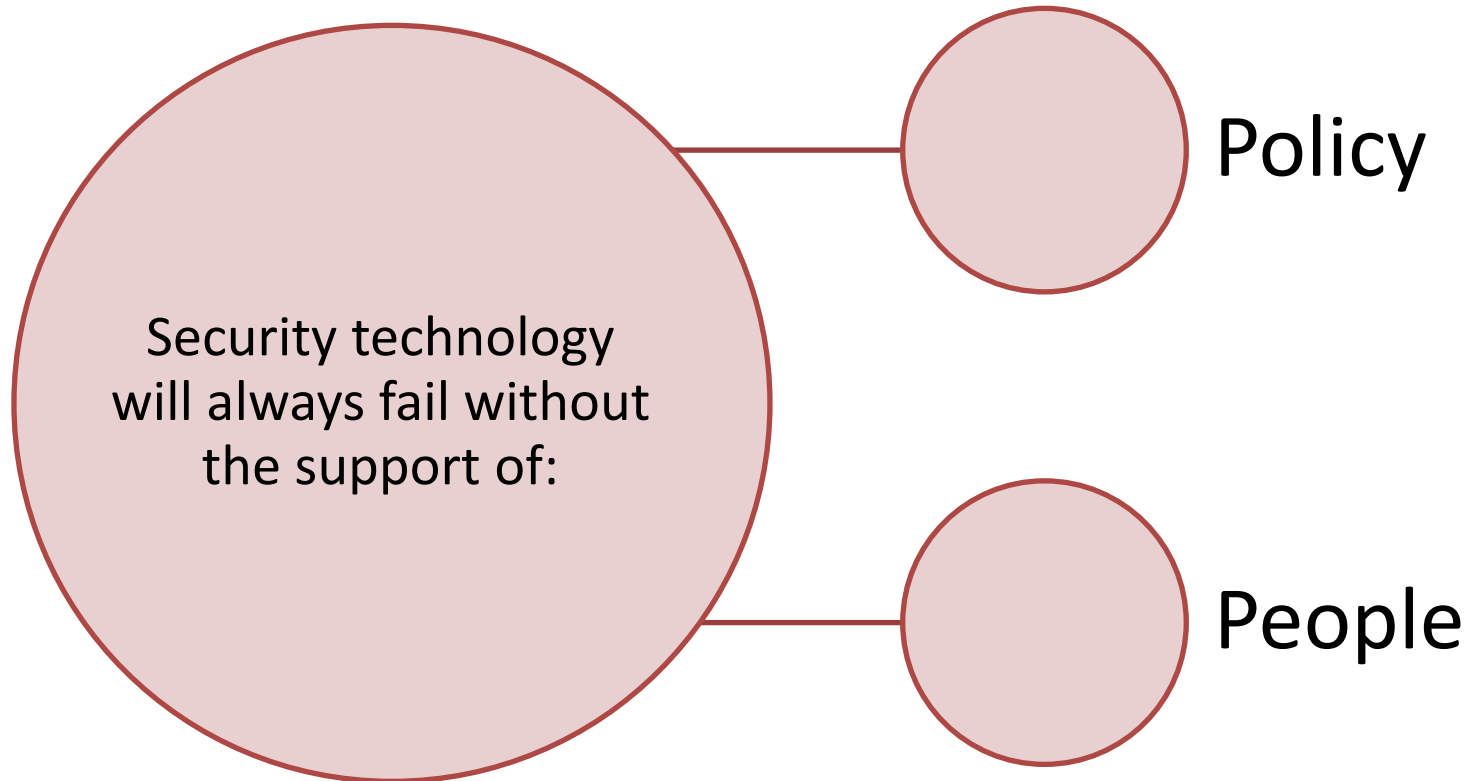

- Growing and emerging threats and risks to health information
- Patients rightly expect that their electronic records will remain secure and private
- You have a legislative responsibility to be proactive about security

It's not just the technology!

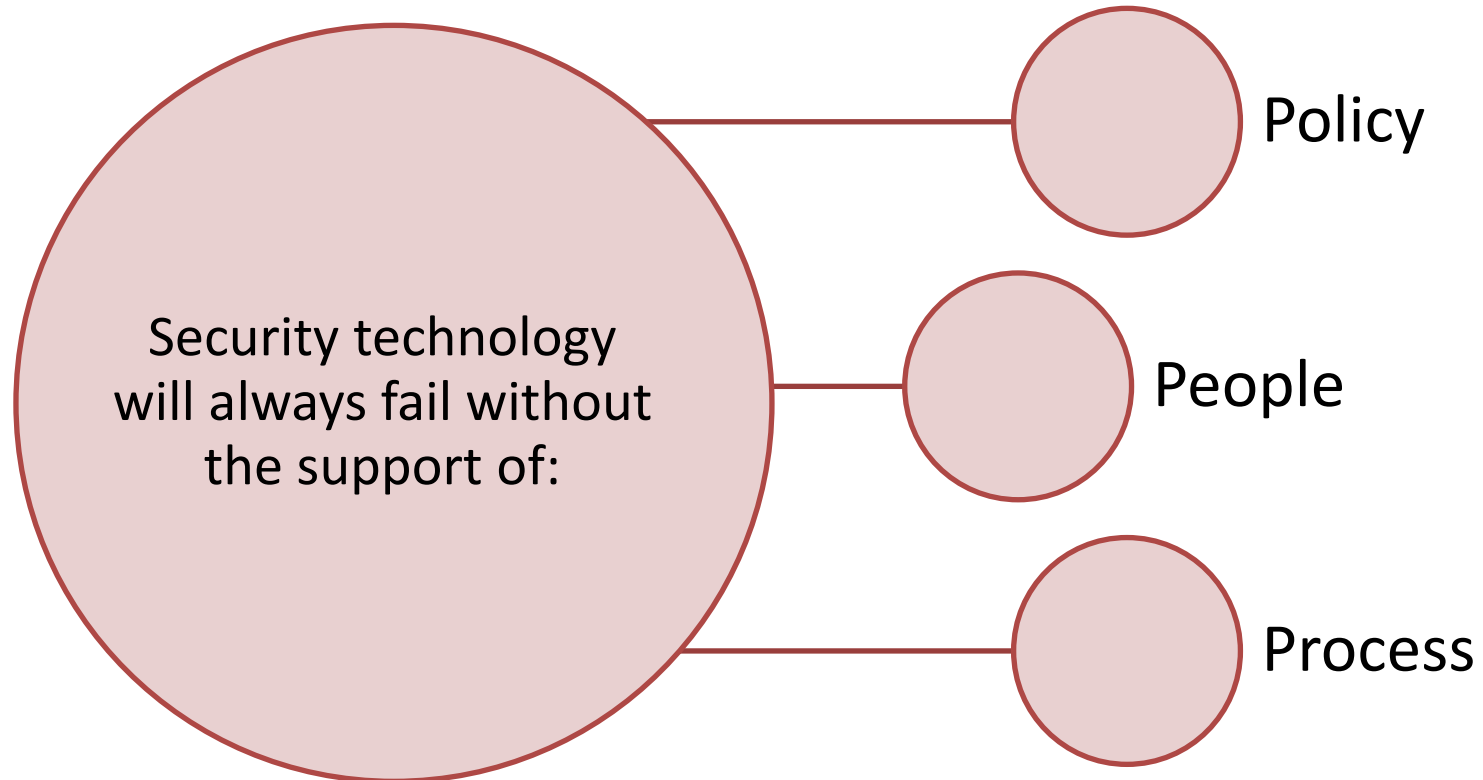

nehta

It's not just the technology!

It's not just the technology!

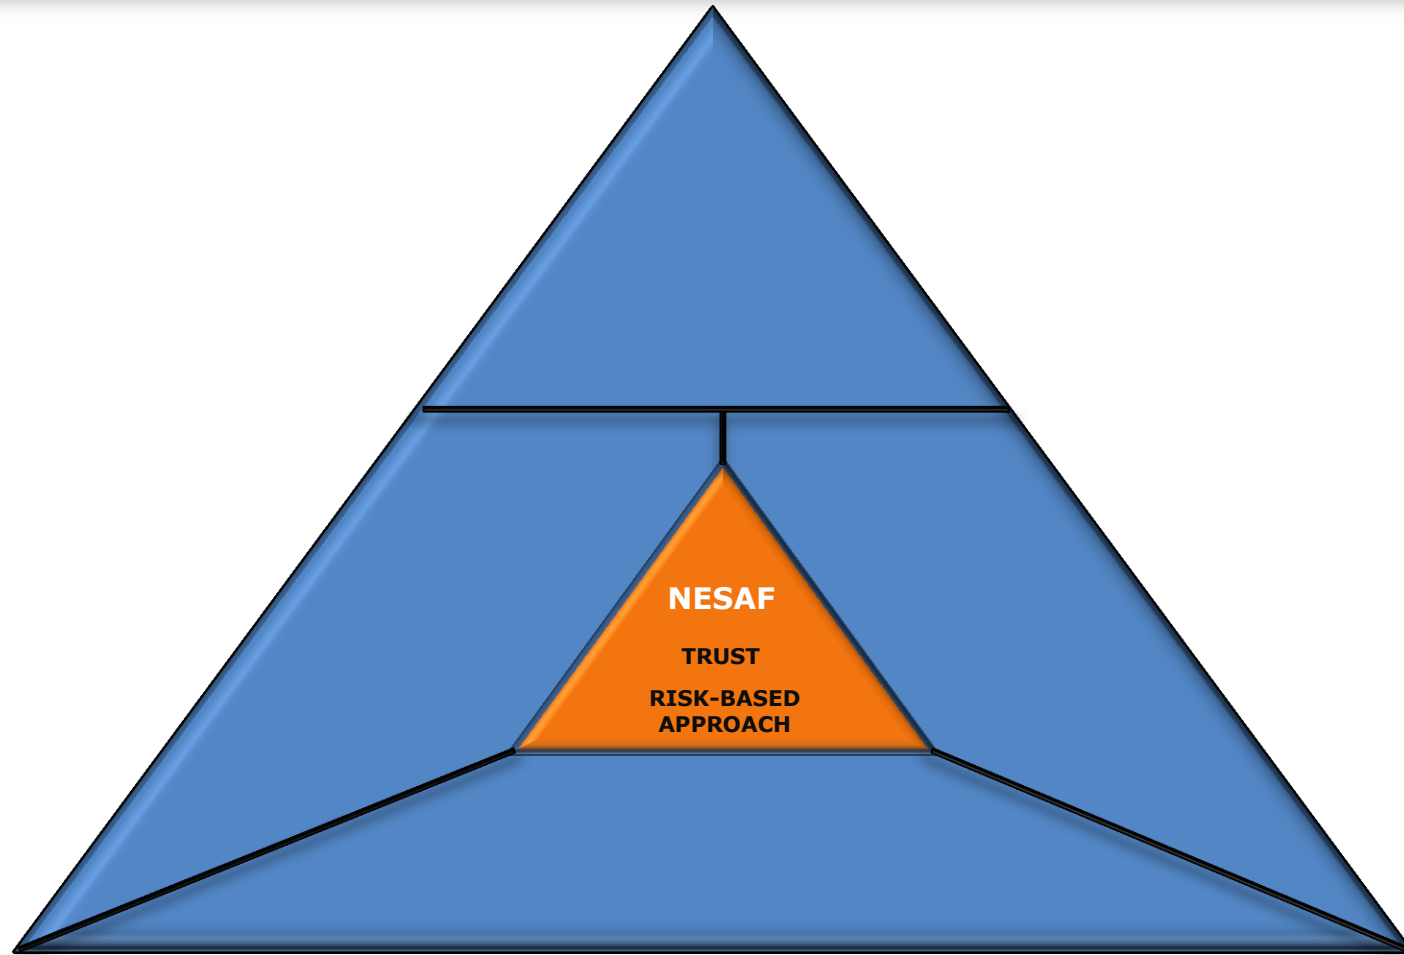

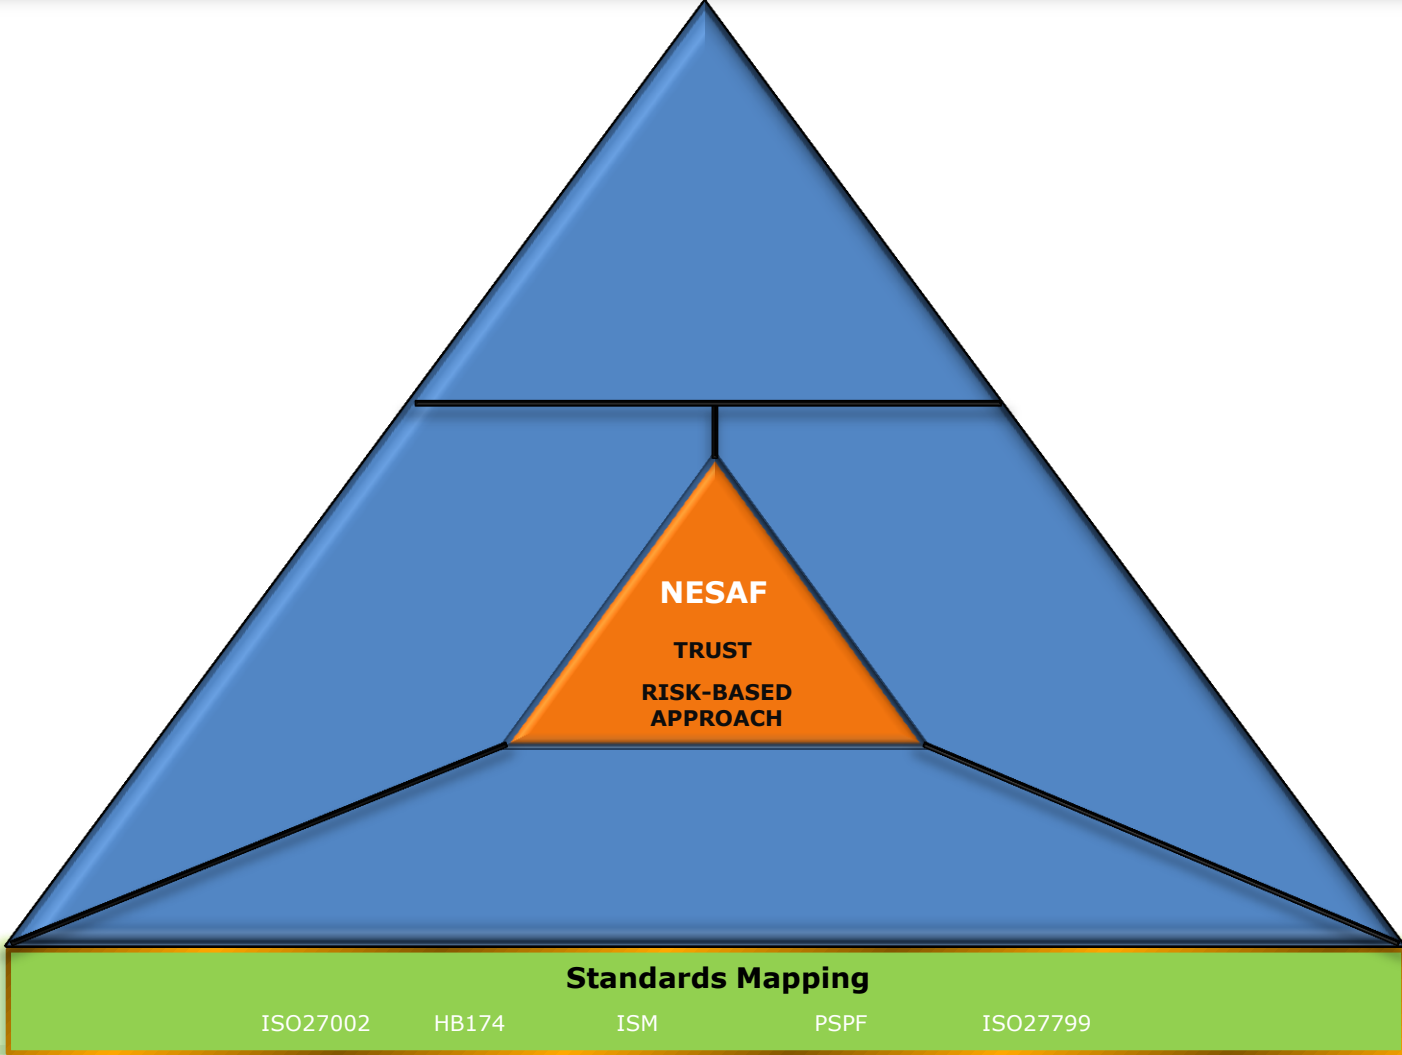

The NESAF.....

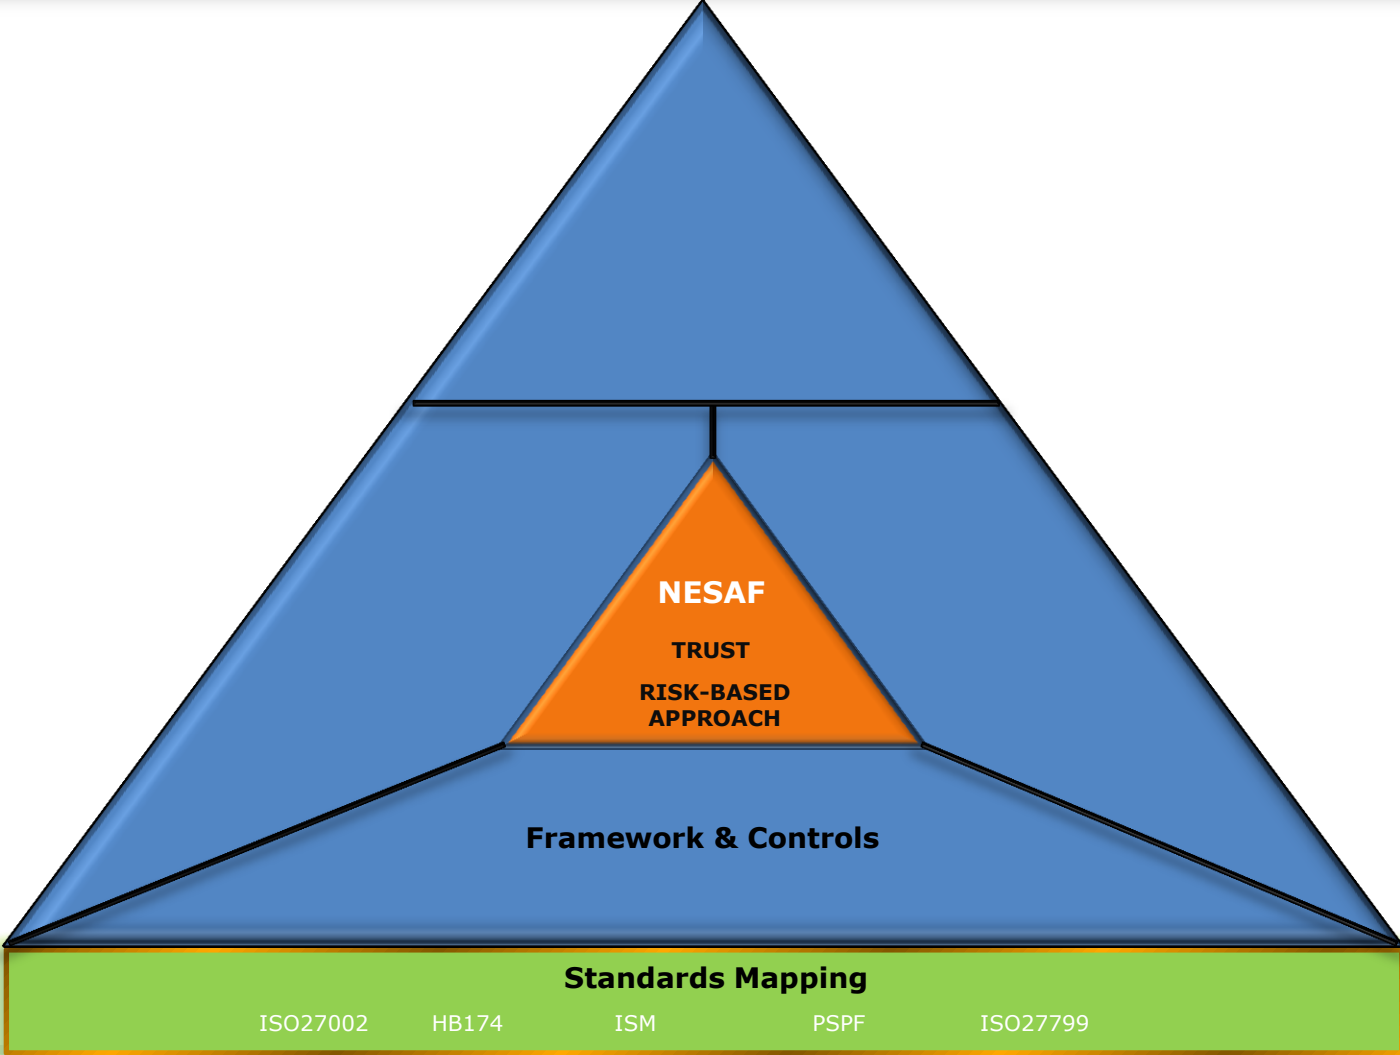

- A generalised better practice framework for eHealth security and access – a risk based approach
- Underpinned by international standards and practices/experiences
- Guidance on determining appropriately security for varying eHealth systems
- An evolving source of contemporary information

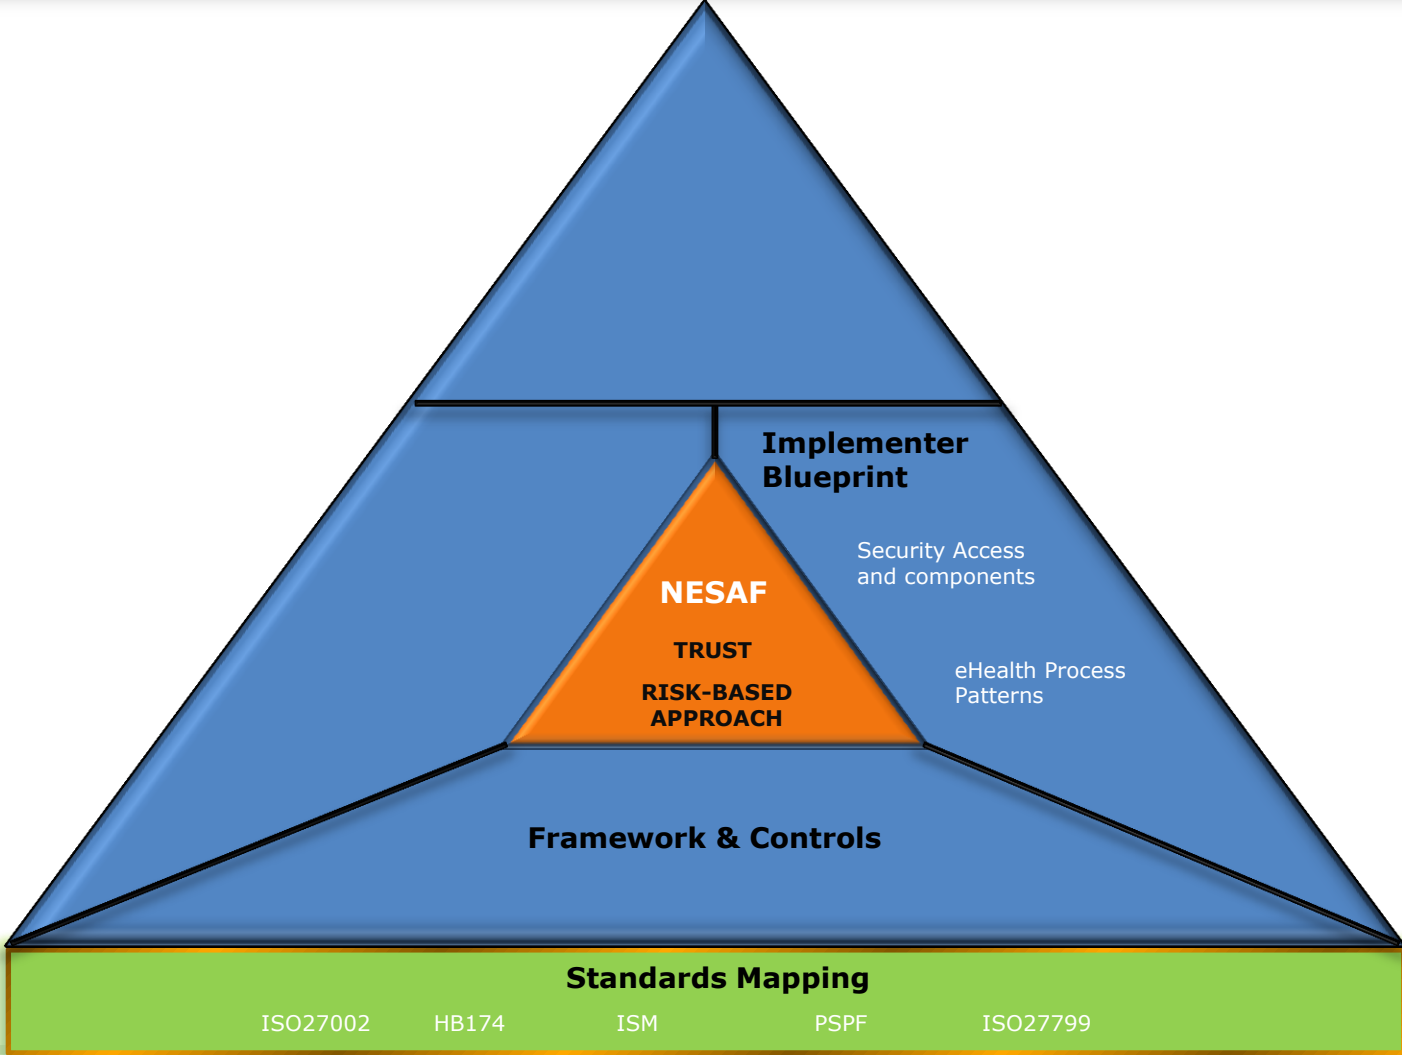

Structure

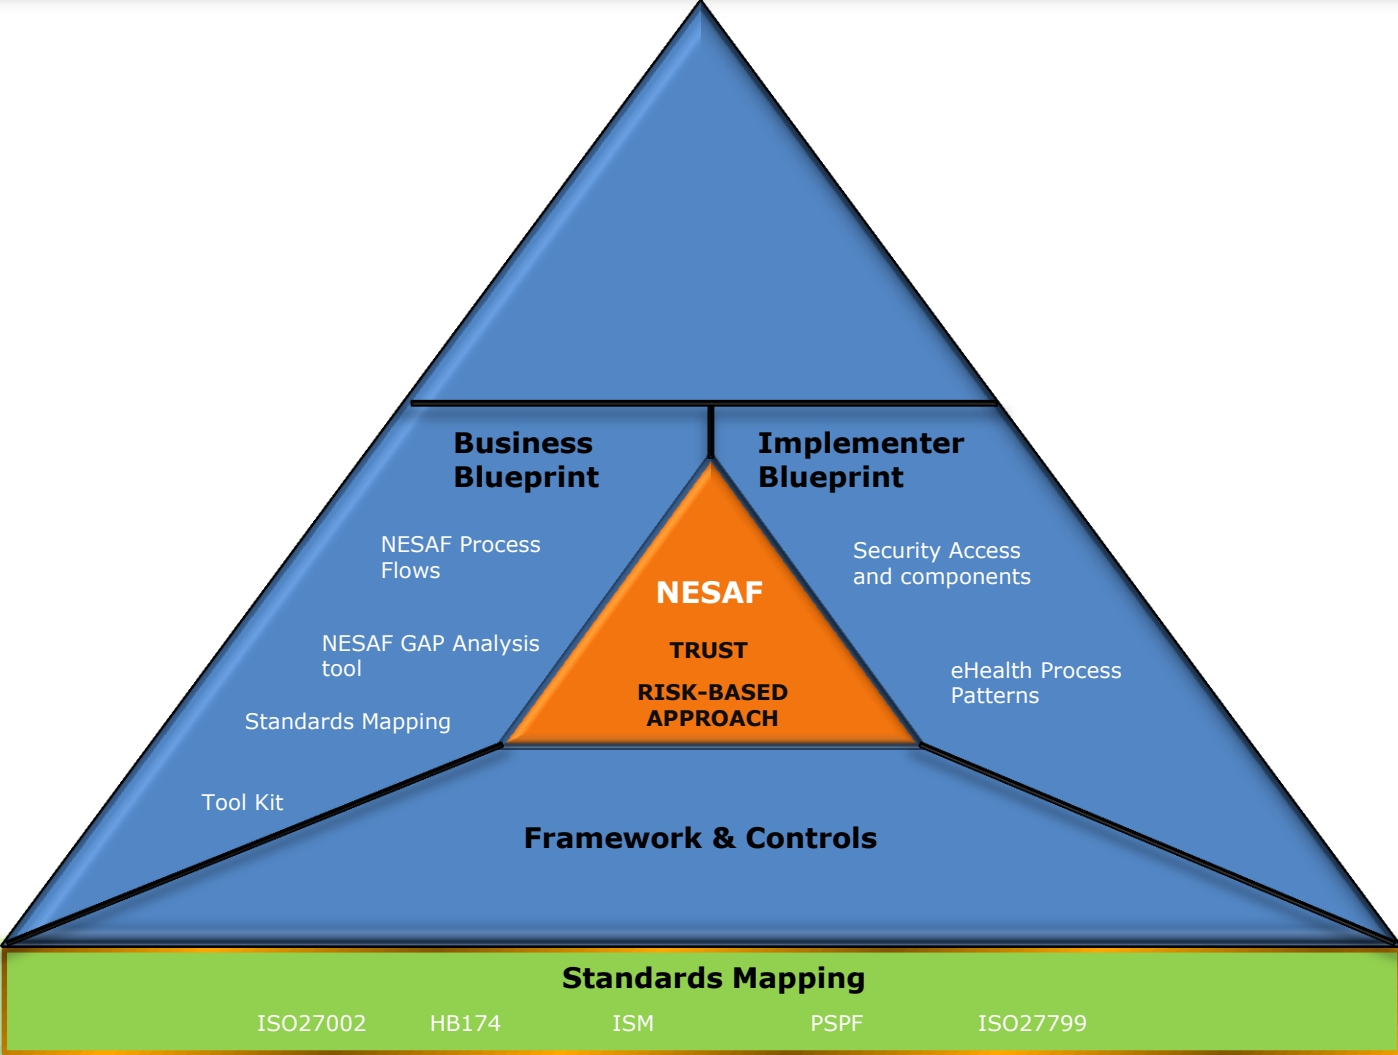

Structure

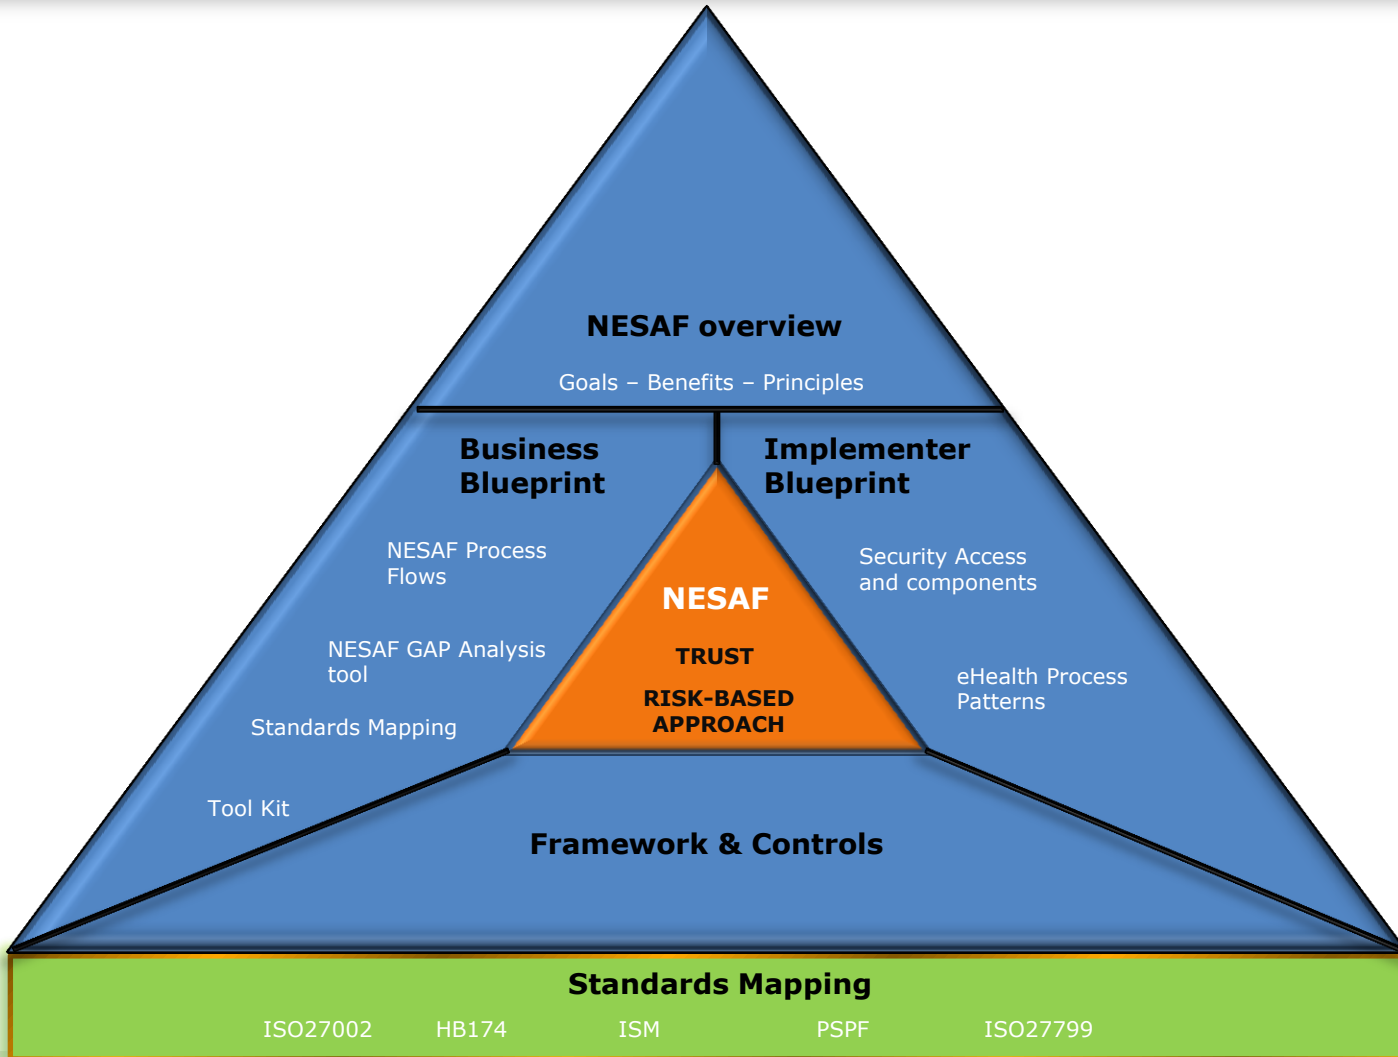

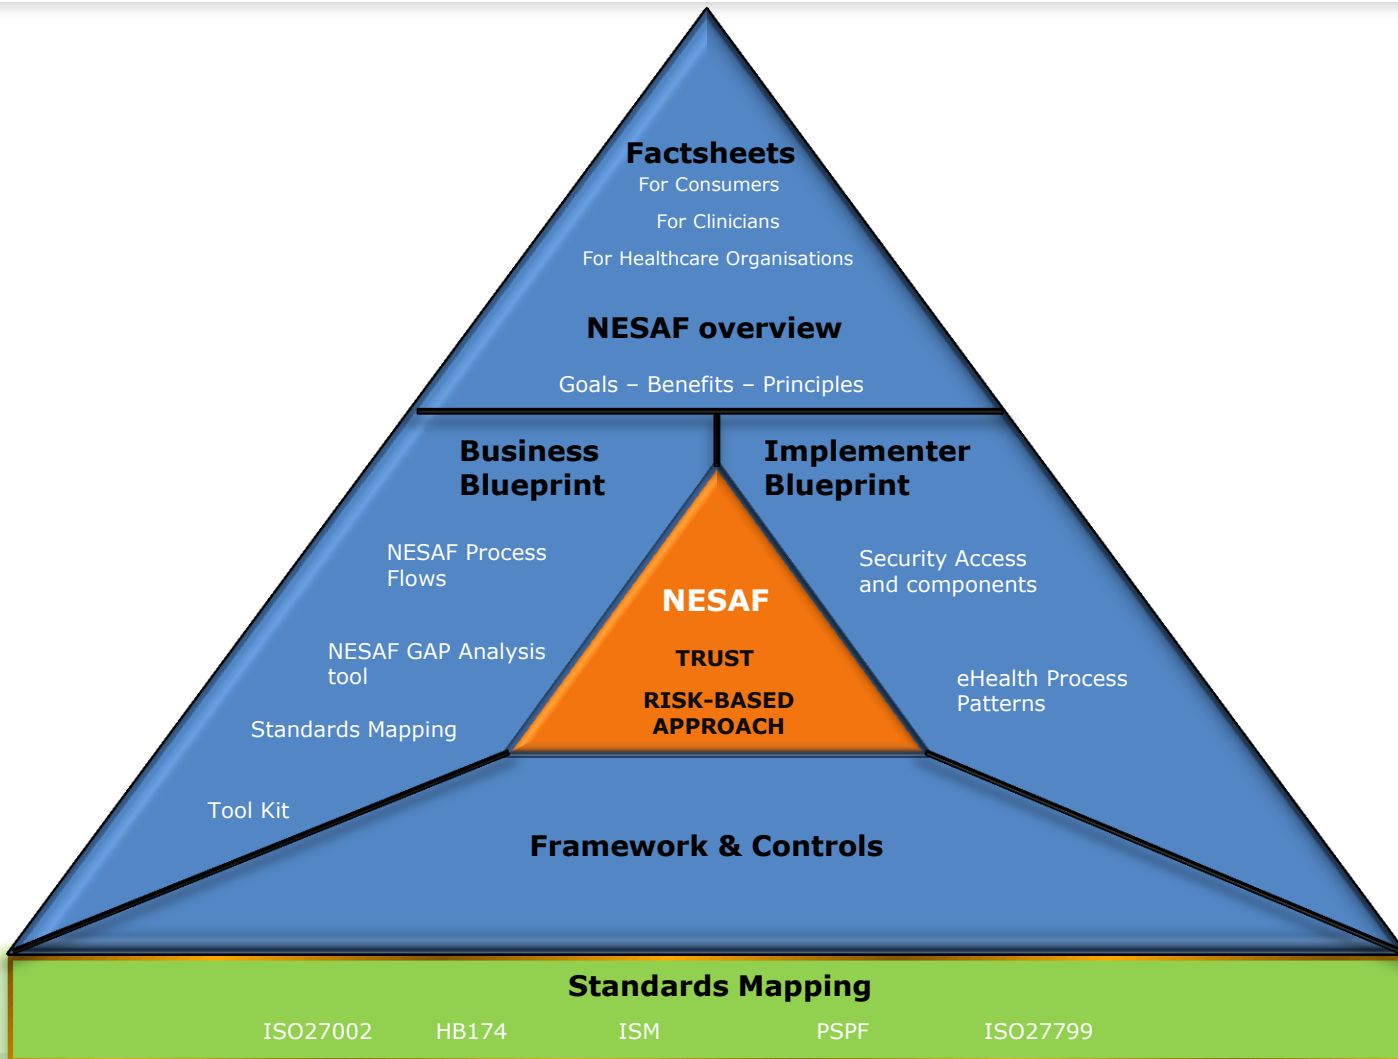

Structure

Structure

Value proposition

- Logical, platform independent
- Structured at a high level
- Simple, scalable – can be tailored for small, medium or large
- Provides a common approach to information access that cultivates a network of trust between all participants in the eHealth journey
- Not overwhelming

Next steps?
