Please ensure you purchase AND ENROL

Value for Organisations

Understand the benefit and development of patient care plans for chronic disease, health interventions that identify risk factors and supporting behaviour changes from team care to interventions that deliver improved health outcomes.

Learning Outcomes

- Determine the persons chronic disease management needs, identify risk factors, understand engagement
- Support the person in behaviour change, recognise the need for referrals, recognise the need for follow-up and review
- Apply effective care planning techniques to support the management process.

***Students must complete the Foundations of Chronic Disease online module to book into this program.**

The program is supported by funding from the Australian Government Department of Health under the Chronic Disease Support Project.
