

Find patients with an active diagnosis of COPD or emphysema who have not had a pneumococcal vaccine in the last 12 months

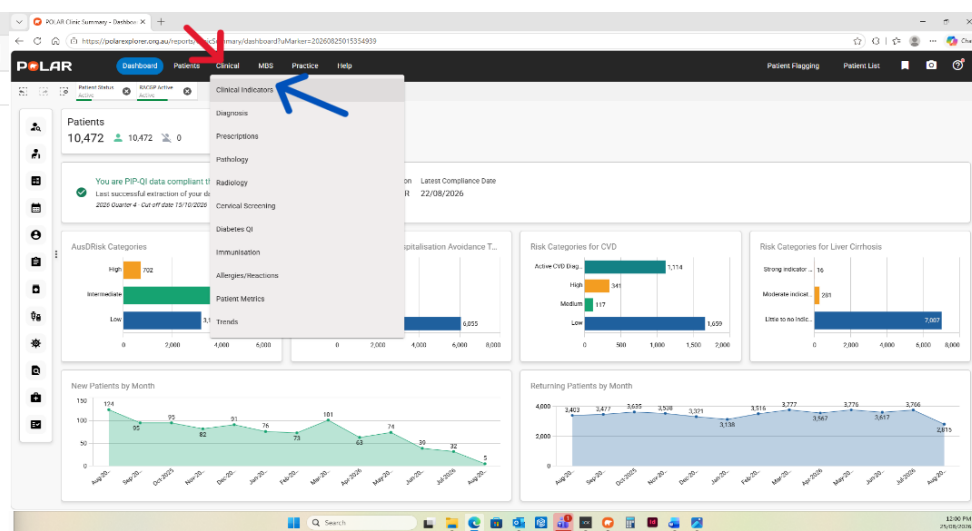

This information can also be found in the clinic summary reports in POLAR [here](#)

Start by selecting the **Quick Filter for RACGP & Active Patients**.

This ensures that **ONLY** patients that have had three visits (across multiple days) in the past 2 years and are active in your clinical software are selected.

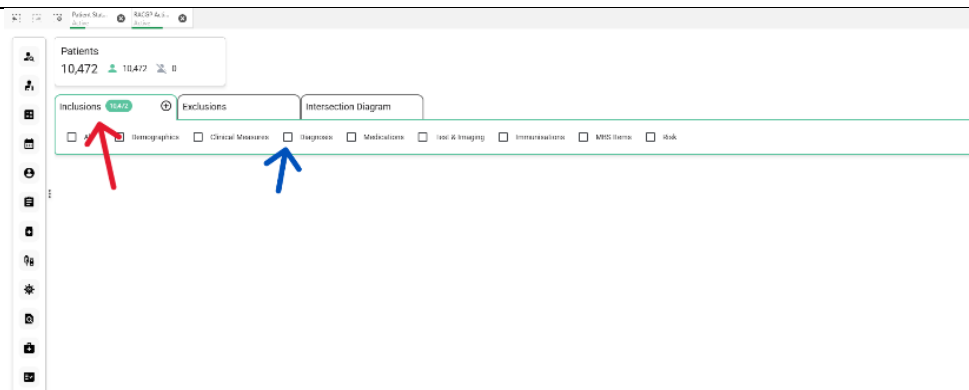

Select the **Clinical** tab. Select the **Clinical indicators** from drop down menu.

POLAR Tutorial

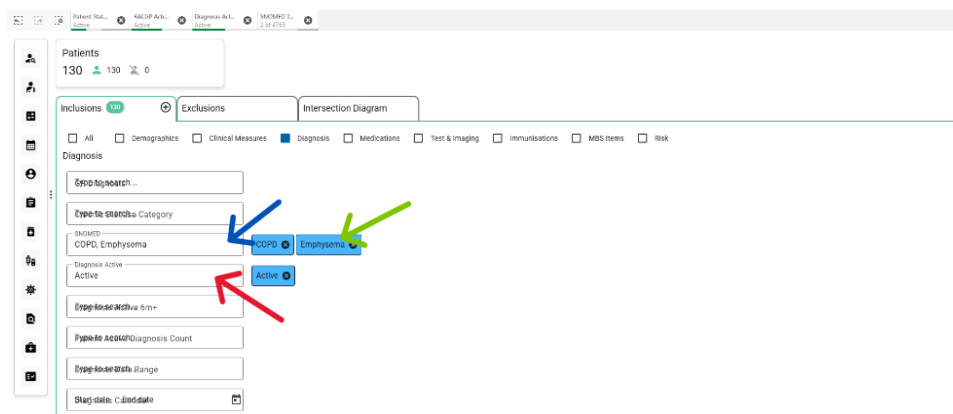

CHN

Select
Inclusions.
Tick the
Diagnosis box.

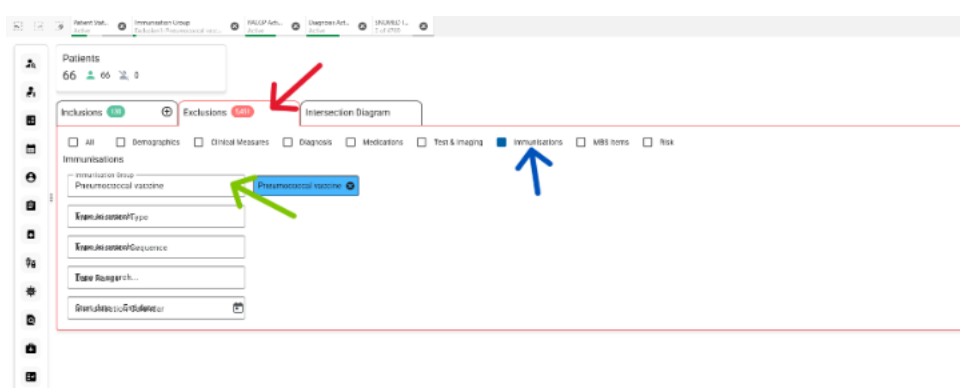

From the
SNOMED tab
select **COPD** and
Emphysema.

Then on the
Diagnosis Active
tab select **Active**

Select **Exclusions**
tab.

Tick the
Immunisation
box.
In the
Immunisation
group tab select
pneumococcal
vaccine.

POLAR Tutorial

Then on the **Date Range** tab, select all dates up to 12 months, 2 to 3 months ago and 4 to 6 months ago and 7 to 12 months ago

Navigate to the **patient list** top right hand corner.

POLAR Tutorial

CHN

You now have your list of patients to **export** and **save** to assist with your Qulk Cycle.
